

## Manila Palm

*Adonidia merrillii*

Height: 20 feet

Spread: 10 feet

Sunlight: ○ ●

Hardiness Zone: 10a

Other Names: syn. Veitchia Merrillii, Christmas Palm

### Description:

This variety is used as an ornamental plant in warm temperate regions; trim away dead foliage to enhance appearance; will slowly mature into a stately palm and make an excellent landscape focal point

### Planting & Growing

Manila Palm will grow to be about 20 feet tall at maturity, with a spread of 10 feet. It has a high canopy with a typical clearance of 6 feet from the ground, and is suitable for planting under power lines. As it matures, the lower branches of this tree can be strategically removed to create a high enough canopy to support unobstructed human traffic underneath. It grows at a slow rate, and under ideal conditions can be expected to live for 60 years or more.

This tropical plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is not originally from North America.

Manila Palm is a fine choice for the yard, but it is also a good selection for planting in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
